

LifeStack OS Finance Module

Expanded Master Metric, Calculation & Insight Guide

Rebuilt in landscape table format so every row fits on-page cleanly. Each tab below includes the original analytical core plus at least five additional metrics, calculations, or decision blocks to deepen institutional usefulness. Column design has been simplified to stop edge overlap and preserve readability.

Columns used in every table: **Metric / Block**, **Type**, **Calculation / Method**, **Decision Use**, and **Suggested Visual / Output**.

01 Executive Summary

Target output density: 19 analytical blocks. Each row should calculate, display, interpret, or trigger a decision.

Metric / Block	Type	Calculation / Method	Decision Use / Why it matters	Suggested Visual / Output
Net Worth	Metric	Assets - liabilities	Anchor wealth level and reconcile whole module	Top KPI card
Total Assets	Metric	Sum of all asset market values	Shows scale of capital base before leverage	Top KPI card
6M Return	Metric	(Closing NW - Opening NW) / Opening NW	Primary short-horizon performance read	Top KPI card
Peak Drawdown	Risk metric	Minimum peak-to-trough cumulative decline	Shows pain experienced, not just end return	Top KPI card
FIRE Progress	Planning metric	NAV / FIRE target	Keeps long-run goal visible	Progress ring
Effective Positions	Construction metric	1 / HHI	Tests whether diversification is real	Top KPI card
Portfolio Quality Score	Composite score	Weighted score across return, risk, tax, process, diversification, efficiency	Converts many diagnostics into one panel	Mini radial gauges
CIO Insight Banner	Insight block	Narrative synthesis of biggest drivers, risks, and next action	Reader should know the story in 20 seconds	Callout strip
Allocation by Sleeve	Allocation metric	Sleeve value / total assets	Quick structure overview	Donut chart
Historical + Forecast NW	Scenario path	Historical NAV linked to base/bull/bear paths	Connects present pain to future path	Line chart with scenario overlays
Holding Contribution (GBP)	Attribution metric	Position or sleeve P&L in GBP	Shows what actually made or lost money	Diverging bar chart
Monthly Return Pattern	Behavior metric	Monthly TWR or estimated NAV change %	Highlights whether losses were episodic or persistent	Column chart
Salary-to-Deployment Flow	Cash conversion metric	Net income split across tax, debt, investing, liquidity	Shows whether income is compounding or leaking	Sankey diagram
Strengths / Weaknesses / Priorities	Decision block	Qualitative synthesis from all tabs	Turns analysis into action	Three-column cards
Active Return vs Benchmark	Metric	Portfolio return - chosen benchmark return	Shows whether outcomes were market beta or real alpha	KPI card + small sparkline
Real Return	Metric	Nominal return - inflation	Shows whether wealth actually gained purchasing power	KPI card
Probability-Weighted 12M NW	Scenario metric	Sum(probability * next-12m scenario NW)	Adds forward decision context to summary page	KPI card
Alert Panel	Risk governance	Rules breached across drawdown, leverage, tax deadlines, cash buffer, crypto risk budget	Surfaces what needs immediate attention	Traffic-light alert stack

Metric / Block	Type	Calculation / Method	Decision Use / Why it matters	Suggested Visual / Output
Decision Quality Score	Process metric	Score based on timing discipline, wrapper use, debt management, concentration cleanup	Separates process quality from market luck	Gauge / dial

02 Structure

Target output density: 19 analytical blocks. Each row should calculate, display, interpret, or trigger a decision.

Metric / Block	Type	Calculation / Method	Decision Use / Why it matters	Suggested Visual / Output
Position Count	Metric	Count of distinct securities, accounts, and sleeves	Measures operational complexity	KPI card
HHI Concentration	Metric	Sum of weight ²	Core concentration statistic	KPI card
Effective Positions	Metric	1 / HHI	More useful than raw count	KPI card
Entropy	Metric	-Sum(w * ln w)	Captures weight evenness	KPI card
Top 3 Weight	Metric	Sum of top 3 weights	Fast read on structural concentration	KPI card
Top 5 Weight	Metric	Sum of top 5 weights	Shows whether concentration broadens or persists	KPI card
Diversification Ratio	Metric	Sum(w*sigma) / portfolio sigma	Estimates correlation-based diversification benefit	KPI card
Full Holdings Table	Inventory	Holding, value, weight, class, geography, currency, role	Base inventory for all downstream analysis	Ranked data table
Sleeve Treemap	Structure view	Relative area by sleeve value	Best compact map of weight distribution	Treemap
Look-Through Exposure	Exposure analysis	ETF constituent, sector, and regional mapping	Shows disguised overlap behind wrappers	Alluvial / Sankey
Wrapper Mix	Structure metric	Weights by ISA, GIA, pension, cash, crypto, alt	Important for tax and access	Horizontal stacked bar
Geography Mix	Exposure metric	Look-through regional weights	Shows hidden US, UK, EM, Japan tilts	Stacked bar or map
Currency Mix	Exposure metric	Look-through FX weights	Useful for GBP liability matching	Bar chart
Concentration Ladder	Structure metric	Top 1 / 3 / 5 / 10 plus micro-position clutter	Shows symbolic clutter versus real holdings	Ladder bars
Sector Mix	Exposure metric	Look-through sector weights across all funds and wrappers	Shows whether you are secretly just buying tech again	Stacked bar
Factor Overlap	Factor analysis	Overlap in growth, quality, momentum, size, value across holdings	Tests whether diversification is cosmetic	Heatmap
Active Share Proxy	Benchmark-relative metric	0.5 * Sum(portfolio weight - benchmark weight) where inferable	Shows how different the portfolio truly is from core benchmark	Bullet chart
Liquidity Ladder	Access metric	Instant / <30d / <90d / locked capital shares	Shows how fast capital can actually move	Horizontal waterfall / ladder
Benchmark Misfit Risk	Diagnostic	Mismatch between current holdings and chosen benchmark exposures	Flags when benchmark comparisons are misleading	Diagnostic table

03 Performance

Target output density: 19 analytical blocks. Each row should calculate, display, interpret, or trigger a decision.

Metric / Block	Type	Calculation / Method	Decision Use / Why it matters	Suggested Visual / Output
Opening Net Worth	Metric	Opening NAV / NW	Reference point for attribution	KPI card
Closing Net Worth	Metric	Closing NAV / NW	Reconciles every attribution line	KPI card
Net Change	Metric	Closing - Opening	Quick bridge from start to finish	KPI card
Inflows	Flow metric	Salary + bonus + employer pension + transfers in	Separates market effect from fresh capital	KPI card
Market P&L	Attribution metric	Net change - net flows +/- balance-sheet adjustments	Core investment result	KPI card
NAV Waterfall Bridge	Attribution view	Start NAV + flows + market + FX + debt + fees + other = end NAV	Most decision-useful attribution visual	Waterfall chart
Sleeve Return vs Contribution	Attribution metric	Return % and contribution in GBP / bps by sleeve	Distinguishes large sleeves from high-return small sleeves	Combo bar + dot
Cumulative Return Path	Path metric	Cumulative TWR series	Shows sequencing of losses and recovery	Line chart
Top Contributors / Detractors	Attribution table	P&L and return by holding	Useful for holding-level review	Table
Monthly Return Heatmap	Behavior view	Monthly returns matrix	Institutional standard for pattern recognition	Heatmap
Benchmark Relative Return	Relative performance	Portfolio return - benchmark return	Shows whether underperformance was beta or allocation driven	Relative line / bar panel
Contribution by Geography	Attribution metric	Region weight * region return	Links allocation to macro	Diverging bars
Decision Attribution	Decision decomposition	Allocation vs selection vs timing vs FX vs debt drag	Turns outcomes into decisions	Waterfall / stacked bar
Return Decomposition	Wealth decomposition	Flows versus investment return	Important for personal-wealth context	Split bridge
Time-Weighted Return (TWR)	Metric	Chain-link subperiod returns to neutralise cash flows	True portfolio-manager style performance measure	KPI + footnote
Money-Weighted Return (XIRR)	Metric	Discount rate that sets dated cash flows to current value	Shows your actual personal capital experience	KPI card
Information Ratio	Metric	Mean active return / tracking error	Tests whether deviations from benchmark paid off	KPI card
Up / Down Capture	Metric	Portfolio performance in up markets and down markets versus benchmark	Shows asymmetry of market participation	Twin bar chart
Hit Rate by Decision Type	Process metric	Winning decisions / total decisions by allocation, security selection, timing, wrapper, debt actions	Distinguishes skill from one-off luck	Matrix table

04 Risk Engine

Target output density: 20 analytical blocks. Each row should calculate, display, interpret, or trigger a decision.

Metric / Block	Type	Calculation / Method	Decision Use / Why it matters	Suggested Visual / Output
Annualised Volatility	Metric	Std dev of returns scaled by sqrt(time)	Baseline risk level	KPI card
Sharpe Ratio	Metric	(Return - risk-free rate) / volatility	Institutional minimum test	KPI card
Sortino Ratio	Metric	(Return - risk-free rate) / downside deviation	Better for asymmetric portfolios	KPI card
Max Drawdown	Metric	Minimum cumulative drawdown	Pain marker	KPI card
VaR 95%	Metric	Historical or parametric 5th percentile loss	Normal-tail loss budget	KPI card
CVaR 95%	Metric	Mean of worst 5% outcomes	True tail pain	KPI card
Tail Ratio	Metric	P95 / P5	Whether upside extremes outweigh downside extremes	Metrics table row
Ulcer Index	Metric	Sqrt(mean(squared drawdowns))	Useful for lived investor pain	Metrics table row
Skewness	Metric	Third moment statistic	Negative skew is crash-prone	Metrics table row
Kurtosis	Metric	Fourth moment statistic	High kurtosis means extremes matter	Metrics table row
Risk Radar	Composite view	Normalised scores across concentration, crypto, FX, liquidity, drawdown	Fast visual cluster of major risks	Radar chart
Risk vs Capital Contribution	Allocation efficiency	Risk share versus capital share by sleeve	Flags inefficient allocations	Dumbbell / stacked bar
Factor Exposure vs Benchmark	Factor risk	Regression or model exposures versus benchmark	Shows intended and accidental bets	Radar / spider
Rolling Volatility + Returns	Time-series risk	Rolling vol plus monthly return path	Shows if volatility is rising into losses	Dual-panel line + bars
Factor Attribution Table	Factor analysis	Exposure, active stance, return contribution, risk share	Connects style to outcomes	Compact table
Tracking Error	Metric	Std dev of active returns versus benchmark	Measures active risk directly	KPI card
Beta	Metric	Cov(portfolio, benchmark) / Var(benchmark)	Shows sensitivity to equity market moves	KPI card
Marginal / Component VaR	Risk decomposition	Position-level contribution to portfolio VaR	Identifies which sleeves dominate tail risk	Stacked bar / table
Drawdown Duration	Metric	Number of periods from prior peak to recovery	Shows how long pain lasts, not just how deep	KPI card
Pain Ratio	Metric	Excess return / Pain Index	Useful when drawdown experience matters more than volatility	KPI card

05 Stress Tests

Target output density: 19 analytical blocks. Each row should calculate, display, interpret, or trigger a decision.

Metric / Block	Type	Calculation / Method	Decision Use / Why it matters	Suggested Visual / Output
Scenario Impact Matrix	Scenario analysis	Reprice sleeves under each named shock	Core institutional stress-testing panel	Table with impact bars
Equities -20%	Scenario	Apply -20% to equity sleeves	Baseline market correction case	Scenario row
Crypto -40%	Scenario	Apply -40% to crypto sleeve	High-probability crypto tail case	Scenario row
BTC -60%	Scenario	Apply -60% to direct BTC and crypto proxies	Single-asset stress	Scenario row
GBP/USD -10%	Scenario	Reprice USD assets into GBP	FX sensitivity	Scenario row
ZAR -20%	Scenario	Reprice ZAR assets into GBP	EM FX stress	Scenario row
Combined Risk-Off	Scenario	Simultaneous haircut to correlated risky sleeves	Shows what happens when correlations go to one	Scenario row
Iran Escalation / Oil Spike	Scenario	Energy up, rates up, risk assets down	Links macro to holdings	Scenario row
UK Stagflation	Scenario	UK equities down, GBP pressured, domestic demand weak	Relevant to UK sleeve and job lens	Scenario row
Probability-Weighted Impact	Risk overlay	Sum(probability * scenario impact)	Useful single-number scenario overlay	Histogram / bar chart
Scenario Heatmap	Cross-scenario matrix	Sleeves versus scenarios matrix	Best way to show nonlinear sensitivity	Heatmap
Tail Concentration	Scenario attribution	Loss contribution share by holding within each scenario	Shows fragility concentration	Stacked bars
Recovery Requirement	Loss framing	Required rebound = $1/(1-\text{loss}) - 1$	Makes downside more intuitive	Table
Risk Trigger Rules	Governance	Defined thresholds tied to scenarios	Operationalises risk governance	Rule box
Rates +100 bps Shock	Scenario	Reprice rate-sensitive equities, cash yield, discount rates, fixed-income proxies	Captures policy error / inflation surprise	Scenario row
Liquidity Freeze	Scenario	Widen bid-ask, increase correlation, haircut crypto and small positions harder	Shows implementation risk under stress	Scenario row
Earnings Recession	Scenario	Reduce equity fair values via lower EPS and lower multiples	Separates cyclical earnings risk from macro noise	Scenario row
Monte Carlo Fan Range	Probabilistic scenario	Simulate correlated return paths and show 10/50/90th percentiles	Moves beyond named single shocks	Fan chart
Actionable Hedge / Response	Decision block	Define likely response for each severe scenario	Turns stress work into policy rather than theatre	Response table

06 Cashflow

Target output density: 19 analytical blocks. Each row should calculate, display, interpret, or trigger a decision.

Metric / Block	Type	Calculation / Method	Decision Use / Why it matters	Suggested Visual / Output
Gross Salary	Income metric	Annual base pay assumption	Core funding source	KPI card
Gross Bonus	Income metric	Expected annual bonus band	Major optionality variable	KPI card
Total Net Expenses	Spending metric	Monthly core spend * 12 plus extras	Defines burn and savings capacity	KPI card
Savings Rate	Metric	(Income - expenses) / income	Primary household operating metric	KPI card
Runway	Liquidity metric	Liquid cash / monthly essential spend	Liquidity resilience	KPI card
Balance Sheet Table	Snapshot	Assets, debts, liquidity, leverage values and percentages	Household balance-sheet view	Table
Monthly Cashflow	Flow metric	Monthly inflow / outflow / investable surplus model	Shows steady-state capacity	Bridge / waterfall
Deployment Status	Execution metric	Used / target / remaining for ISA, pension, emergency fund, debt	Turns advice into execution tracking	Progress bars
Net Free Cash Flow	Metric	Net income - essential expenses - debt service	What is genuinely available to allocate	Bullet metric
Debt-to-Assets	Metric	Total debt / total assets	Low ratio can still hide bad debt	Table row / KPI
Emergency Fund Coverage	Metric	Liquid reserves / essential expenses	Needed for forced-sale prevention	Gauge / KPI
Capital Conversion Efficiency	Metric	NW growth / total income	Best personal capital-efficiency metric	Funnel / Sankey
Bonus Dependence	Metric	Bonus-derived investable capital / total investable capital	Shows fragility of plan	Donut / KPI
Deployment Lag	Metric	Average time from cash receipt to deployment	Measures operational slippage	Timeline / KPI
Fixed Obligations Ratio	Metric	Fixed monthly obligations / net monthly income	Shows how flexible the budget really is	KPI card
Debt Service Ratio	Metric	Monthly debt service / net monthly income	Measures drag from financing choices	KPI card
Post-Tax Investable Surplus	Metric	Net income - tax - essential spend - debt service - required buffers	More decision-useful than gross savings rate	KPI card
Cash Buffer Adequacy	Metric	Current liquid cash / target emergency buffer	Shows whether liquidity is excess or prudent	Bullet chart
Savings Velocity	Trend metric	Rolling 3m / 6m average of monthly net savings	Shows whether discipline is improving or slipping	Line chart

07 Bonus Strategy

Target output density: 19 analytical blocks. Each row should calculate, display, interpret, or trigger a decision.

Metric / Block	Type	Calculation / Method	Decision Use / Why it matters	Suggested Visual / Output
Gross Salary Assumption	Input	User assumption	Income engine input	KPI card
Bonus Range	Input	Expected gross bonus band	Drives scenario sizing	KPI card
Net Bonus	Metric	Gross bonus * (1 - effective tax rate)	Real deployable capital	KPI card
ISA Capacity	Metric	Annual allowance - used amount	Highest-certainty alpha bucket	KPI card
Amex Liability	Metric	Outstanding balance	Guaranteed-return use of capital	KPI card
Scenario Comparison	Scenario block	Defensive / balanced / aggressive allocation templates	Best high-level policy view	Stacked bar comparison
Defensive Allocation	Scenario	Preset bucket sizing	Capital preservation template	Scenario card
Balanced Allocation	Scenario	Debt + ISA + pension + core equities + AI + crypto + liquidity + lifestyle mix	Likely default policy template	Scenario card
Aggressive Allocation	Scenario	Higher growth-asset deployment	High-CAGR but higher drawdown path	Scenario card
1Y / 3Y / 5Y Outcomes	Projection	Compounded expected return on deployed bonus	Shows opportunity cost of being too defensive	Table
Guilt-Free Spend Line	Behavioral control	Net bonus minus required debt, ISA, reserve, target allocation	Maximum lifestyle spend that preserves plan quality	Callout
Priority Use of Funds	Decision order	Debt -> ISA -> pension -> core equities -> optional risk -> travel	Makes deployment executable	Checklist
Front-Load vs Stage	Decision	Use valuation / risk regime overlay to phase bonus deployment	Useful in choppy markets	Decision card
Recommended Mix	Decision	Rank strategy by expected value and risk	Converts model into action	Narrative box
Effective Bonus Tax Rate	Metric	1 - (net bonus / gross bonus)	Stops fantasy deployable numbers	KPI card
After-Action Liquidity	Metric	Remaining liquid cash after proposed bonus deployment	Shows whether strategy leaves you exposed	KPI card
Risk Budget Fit	Metric	Planned post-bonus asset mix versus target risk budget	Ensures bonus does not distort portfolio architecture	Bullet chart
Regret Minimiser Outcome	Decision metric	Compare downside regret if market falls after deployment versus upside regret if cash sits idle	Useful for staging choice	2x2 matrix
Bonus Deployment IRR	Metric	Implied expected return on each allocation bucket over 1-3 years	Lets debt repayment, ISA top-up, AI sleeve, and crypto compete on one scale	Ranking table

08 Opportunities

Target output density: 19 analytical blocks. Each row should calculate, display, interpret, or trigger a decision.

Metric / Block	Type	Calculation / Method	Decision Use / Why it matters	Suggested Visual / Output
Opportunity Radar	Composite ranking	Weighted score of conviction, timing, expected value, fit	Best visual for what to act on now	Scatter / bubble matrix
Conviction Score	Scoring metric	Subjective / inferred 1-10 durability score	Separates real ideas from noise	Bubble axis
Timing Score	Scoring metric	Blend of valuation, momentum, catalyst, sentiment	Stops good ideas being bought badly	Bubble axis
Estimated Annual Value	Value metric	Tax saved, expected return uplift, drag removal, or alpha estimate	Puts all ideas on one capital-allocation scale	Bubble size / ranking bar
Top 5 by Annual Value	Priority ranking	Rank by expected annual value	Shows what matters most in pounds, not vibes	Horizontal bars
Composite Ranking Table	IC table	Opportunity, role, score, annual value, timing note, wrapper fit	IC-style comparison sheet	Table
Salary Sacrifice Optimisation	Opportunity	Incremental tax saved from pension contribution	Structural alpha	Opportunity row
Bed & ISA	Opportunity	Annual tax drag avoided via wrapper migration	High-certainty alpha	Opportunity row
BTC Accumulation / Consolidation	Opportunity	Expected value conditional on cycle metrics	High-risk satellite decision	Opportunity row
AI Infrastructure / Semis	Opportunity	Sizing based on regime and concentration rules	Growth kicker	Opportunity row
Quality Global Equities	Opportunity	Expected excess return from broadening quality exposure	Core compounding candidate	Opportunity row
UK Infrastructure / Value	Opportunity	Expected carry + rerating	Potential job-adjacent edge	Opportunity row
Execution Status	Workflow	Not started / research / ready / staged / executed	Bridges research to action	Pill tags
Invalidation Trigger	Discipline rule	Pre-defined condition that kills the thesis	Essential for discipline	Small rule card
Expected IRR / CAGR	Return metric	Base-case expected annualised return by opportunity	Lets all ideas compete on a common return basis	Table column
Downside / Upside Ratio	Risk-reward metric	Estimated downside if wrong versus upside if right	Improves sizing discipline	Slope / ratio chart
Correlation Benefit	Portfolio fit	Correlation of opportunity to current portfolio or risk bucket	Shows diversification benefit, not just raw return	Heatmap / score
Implementation Friction	Execution metric	Score for liquidity, wrapper access, tax friction, complexity, effort	Stops elegant ideas dying in real life	Traffic-light table
Catalyst Window	Timing metric	Expected time range for thesis validation	Improves monitoring cadence and patience	Timeline bar

09 Efficiency

Target output density: 19 analytical blocks. Each row should calculate, display, interpret, or trigger a decision.

Metric / Block	Type	Calculation / Method	Decision Use / Why it matters	Suggested Visual / Output
Annual Drag by Cost	Metric	Debt interest + tax drag + idle cash drag + fragmentation + fees	One number for friction	KPI card
1Y Cost	Metric	Annualised drag estimate	Immediate pain	KPI card
10Y Cost	Metric	Future value of annual drag stream	Shows how small frictions become serious	KPI card
Efficiency Score	Composite	Weighted score across drag categories	Executive shorthand for capital use quality	KPI card
Annual Drag Breakdown	Component view	Debt, GIA tax drag, idle cash, fragmentation, fees, FX drag	Shows where money leaks	Bar chart
Cumulative Drag Over Time	Trend	Projected value lost if frictions persist	Powerful behavior changer	Line chart
Debt Drag	Metric	Balance * APR	Guaranteed negative alpha	Row / bar
Tax Drag	Metric	(Pre-tax return - after-tax return) * capital	Silent annual leak	Row / bar
Idle Cash Drag	Metric	(Target return - cash yield) * excess cash	Common hidden underperformance	Row / bar
Fragmentation Drag	Metric	TER overlap + admin complexity + low-impact positions	Operational inefficiency masquerading as diversification	Row / bar
Fee Drag	Metric	Weighted expense ratio + explicit fees	Institutional hygiene metric	Row / bar
Structural Fixes Table	Decision table	Action, annual saving, certainty, timing	Best execution summary	Table
Efficiency Uplift	Metric	Base annual drag - post-fix annual drag	Shows why cleanup matters	Waterfall
Capital Repricing Lens	Capital map	Yield / return / APR by capital pool	Turns portfolio into a capital-allocation market	Matrix
Wrapper Efficiency Score	Metric	Weighted score for proportion of growth assets sheltered in ISA/pension	Measures tax shelter quality directly	Gauge
Active Fee per Unit Alpha	Metric	Fees / active return or expected alpha	Tests whether expensive sleeves earn their keep	Scatter / table
Turnover Drag	Metric	Estimated cost from switching, spreads, taxes, slippage	Shows cost of overactivity	Bar chart
Decision Latency Cost	Metric	Value lost because obvious fixes were delayed	Makes procrastination measurable	Waterfall
Weighted Capital Yield	Metric	Weighted average effective yield / APR / expected return across capital pools	Gives a clean repricing summary of each pound	Bullet chart

10 Long-Term

Target output density: 19 analytical blocks. Each row should calculate, display, interpret, or trigger a decision.

Metric / Block	Type	Calculation / Method	Decision Use / Why it matters	Suggested Visual / Output
Financial Capital	Metric	Current NAV / investable asset base	Starting point	KPI card
Human Capital	Metric	Discounted future after-tax earnings stream	Often larger than portfolio itself	KPI card
Total Wealth	Metric	Financial capital + human capital	Broader wealth lens	KPI card
HC % of Wealth	Metric	Human capital / total wealth	Asset-allocation context	KPI card
FIRE Progress	Metric	NAV / FIRE target	Primary long-term milestone	KPI card
HC vs FC Evolution	Projection	Projected human capital and financial capital paths	Shows transition from labour-led to capital-led wealth	Area / line chart
Savings vs Returns Contribution	Attribution	Wealth growth split between new savings and investment returns	Key maturity marker	Area chart
Path to GBP1m / 2m / 5m	Milestone timing	Scenario model outputs	Useful strategic horizon view	Milestone table
Required CAGR	Metric	Solve r from future value equation	Tests realism of goals	Bullet metric
Contribution vs Return Decomposition	Attribution	Cumulative contributions and gains	Behavioral anchor	Stacked area chart
Coast FIRE Progress	Metric	Current capital / required coast capital	Useful optionality metric	Progress bar
Probability-Weighted Net Worth	Scenario metric	$\text{Sum}(\text{probability} * \text{scenario NAV})$	Central planning output	KPI / line
Sequence Risk Commentary	Insight	Stress long-term path under bad early returns	Stops false certainty	Callout
Withdrawal Support	Metric	$\text{NAV} * \text{safe withdrawal rate}$	Translates wealth into life options	KPI / bar
Monte Carlo Percentiles	Scenario metric	Simulated 10th / 50th / 90th percentile wealth paths	Shows full distribution, not just three neat stories	Fan chart
Probability of Hitting Milestones	Probability metric	$P(\text{NW} \geq \text{target by year } t)$	More useful than target date alone	Probability bar chart
Doubling Time	Metric	$\ln(2) / \text{expected growth rate}$	Simple intuition for compounding speed	KPI card
Required Savings Rate	Metric	Savings rate needed to hit chosen NW target by date given expected returns	Shows whether target relies on return fantasy or savings discipline	KPI card
Real Wealth Path	Inflation-adjusted metric	Nominal projected NW deflated by inflation path	Prevents nominal-money self-delusion	Dual line chart

11 Crypto Engine

Target output density: 19 analytical blocks. Each row should calculate, display, interpret, or trigger a decision.

Metric / Block	Type	Calculation / Method	Decision Use / Why it matters	Suggested Visual / Output
BTC Spot / Reference Price	Metric	Current market price snapshot	Core crypto anchor	KPI card
Crypto Weight	Metric	Crypto value / total assets	Capital allocation share	KPI card
Crypto Risk Share	Metric	Risk contribution share of crypto sleeve	More important than capital share	KPI card
Signal Density Score	Composite	Weighted blend of bullish / bearish cycle indicators	Cycle state summary	KPI card
Crypto P&L	Metric	Current crypto value - prior period value	Economic impact	KPI card
MVRV	On-chain metric	Market value / realised value	Cycle valuation marker	Signal tile
Fear & Greed	Sentiment metric	External crypto sentiment index	Retail positioning read	Signal tile
Price Momentum Condition	Technical metric	Trend / moving-average / breakout state	Tactical timing aid	Signal tile
Whale Accumulation	On-chain flow	Net accumulation by large wallets	Smart-money behaviour signal	Signal tile
SOPR / NUPL / RHODL / Reserve Risk	On-chain set	Advanced cycle indicators from on-chain providers	Raises sophistication beyond price	Signal strip
Crypto Holdings Table	Table	Holding, value, prior value, P&L, action	Position-level discipline	Table
Crypto Holdings P&L Chart	Attribution	Holding-level P&L by token	Shows where damage or gains sit	Bar chart
Consolidation Decision	Decision rule	Signal-weighted keep-BTC-core / simplify-alts rule	Prevents emotional over-trading	Action box
Mechanical Trim / Add Rules	Governance	Preset sell and buy thresholds tied to risk budget and cycle metrics	Necessary for discipline	Checklist
BTC Dominance	Market structure metric	BTC market cap / total crypto market cap	Shows when beta is concentrating in BTC versus rotating to alts	KPI / line
Funding Rates / Open Interest	Derivatives metric	Perp funding and aggregate OI regime	Flags crowded speculative positioning	Dual-axis line
Realised Volatility	Metric	Std dev of crypto returns over rolling window	Shows whether sizing still fits risk budget	KPI card
Stablecoin Liquidity Proxy	Liquidity metric	Stablecoin market-cap trend / issuance / exchange balance	Useful proxy for fresh dry powder in crypto system	Area chart
Spot ETF Flow Trend	Flow metric	Net spot ETF inflows / outflows where applicable	Links institutional demand to price regime	Bar + line panel

12 Action Plan

Target output density: 19 analytical blocks. Each row should calculate, display, interpret, or trigger a decision.

Metric / Block	Type	Calculation / Method	Decision Use / Why it matters	Suggested Visual / Output
Immediate Actions	Action list	Next 30 days with amount, destination, timing	Front of queue	Checklist table
Quarter Actions	Action list	Next 90 days execution list	Keeps momentum after first fixes	Checklist table
Annual Actions	Action list	This-year structural actions and review points	Ensures strategy changes stick	Checklist table
Clear Amex	Action row	Amount, source, timing, annual saving	No-brainer use of cash	Action row
Max ISA	Action row	Amount, wrapper, target holdings, timing	High-certainty alpha	Action row
Salary Sacrifice	Action row	Monthly amount, destination, tax reason	Major structural lever	Action row
Consolidate Micro Positions	Action row	Sell tiny positions and redeploy to core	Reduces clutter	Action row
Bed & ISA	Action row	Sell / rebuy amount, timing, tax gain	Gradual tax optimisation	Action row
Emergency Fund Rebuild	Action row	Target cash level and timing	Stops forced selling	Action row
Investment Policy Statement	Governance artifact	Define target weights, thresholds, rebalancing rules	Builds process discipline	Action row
Five Conclusions	Summary block	Sharp synthesis of all analysis	Reader should remember these	Callout list
Impact by Action	Prioritisation metric	Annual saving or expected uplift per action	Prioritisation aid	Bar chart
Status / Owner / Deadline	Execution tracker	Status, responsible party, target date	Turns report into a system	Progress table
Monitoring Triggers	Rule box	Specific conditions that reopen each action	Prevents drift	Rule box
Priority Score	Action ranking	Weighted score for certainty, annual value, urgency, ease, risk reduction	Creates an execution order that is not random	Ranked table
Confidence Level	Decision quality	High / medium / low confidence per action	Separates certain fixes from fuzzy ideas	Pill tags
Dependency Mapping	Execution logic	Which actions require previous actions first	Stops impossible sequencing	Dependency tree
30-60-90 Roadmap	Execution view	Map actions to month buckets	Makes implementation more realistic	Roadmap swimlane
Realised vs Planned Impact	QA metric	Track actual annual uplift versus forecast uplift after execution	Turns action plan into a learning system	Variance table

13 Tax Advisor

Target output density: 19 analytical blocks. Each row should calculate, display, interpret, or trigger a decision.

Metric / Block	Type	Calculation / Method	Decision Use / Why it matters	Suggested Visual / Output
Annual Tax Optimisation Value	Metric	Sum of quantified tax savings	Total tax alpha	KPI card
Pre-Tax Equivalent	Metric	After-tax value / (1 - marginal tax rate)	Makes tax alpha feel real	KPI card
10Y Value	Metric	Future value of annual savings	Long-term importance of tax choices	KPI card
Salary Sacrifice	Priority row	Tax saved from contributions in taper band	Highest-certainty personal tax alpha	Priority row
ISA Deployment	Priority row	Tax-free growth versus taxable account	Irreplaceable shield	Priority row
Employer Pension Match	Priority row	Employer contribution captured	Risk-free return	Priority row
Clear Amex	Priority row	Interest avoided framed as tax-equivalent value	Often beats investing	Priority row
Bed & ISA Strategy	Priority row	Tax drag reduction from migration	Medium-term structural play	Priority row
CGT Harvesting	Priority row	Tax saved by crystallising gains / losses	Calendar-driven alpha	Priority row
Dividend Tax Optimisation	Priority row	Dividend tax avoided by sheltering income assets	Useful for yield assets	Priority row
Tax Advisor Summary	Narrative prioritisation	Qualitative synthesis of top tax actions	What should be done first	Callout
Marginal Rate Zone Analysis	UK-specific metric	Effective marginal rate around taper / allowance cliffs	Critical UK-specific insight	Inset note
Wrapper Migration Roadmap	Projection	Projected wrapper mix by year	Shows progress path	Timeline
Assumptions / Caveats	Governance note	Rules and items needing adviser verification	Maintains intellectual honesty	Footnote box
Tapered Annual Allowance Usage	Metric	Used pension allowance / tapered annual allowance	Shows whether you are close to breaching pension rules	KPI card
Carry-Forward Estimate	Metric	Unused allowance from prior three years where inferable	Highlights hidden additional shelter capacity	KPI card
Dividend Allowance Usage	Metric	Dividend income / annual dividend allowance	Prevents avoidable tax leakage from taxable wrappers	Progress bar
Tax Calendar Countdown	Execution metric	Days to ISA year-end, self-assessment deadlines, CGT planning windows	Adds urgency to time-sensitive actions	Countdown tile
Sheltered Asset Ratio	Metric	Growth assets in ISA/pension / total growth assets	Simple summary of wrapper quality	Gauge

14 Glossary

Target output density: 19 analytical blocks. Each row should calculate, display, interpret, or trigger a decision.

Metric / Block	Type	Calculation / Method	Decision Use / Why it matters	Suggested Visual / Output
Risk Metrics	Reference	Definitions of vol, drawdown, VaR, CVaR, tail ratio, skew, kurtosis	Makes dashboard outputs interpretable	Reference table
Performance Metrics	Reference	Definitions of TWR, IRR, contribution, active return, attribution	Standardises language	Reference table
Construction Metrics	Reference	Definitions of HHI, effective positions, diversification ratio, entropy, active share	Needed for structure tab	Reference table
Factor Metrics	Reference	Definitions of beta, growth, value, quality, momentum, crypto beta, FX sensitivity	Bridges jargon to output	Reference table
Wealth Planning Metrics	Reference	Definitions of FIRE, coast FIRE, human capital, sequence risk, doubling time	Supports long-term tab	Reference table
Crypto Metrics	Reference	Definitions of MVRV, NUPL, SOPR, reserve risk, RHODL, hash ribbons	Needed for crypto engine	Reference table
Tax Metrics	Reference	Definitions of tax drag, Bed & ISA, CGT harvesting, wrapper efficiency	Supports tax tab	Reference table
Formula Display	Usability block	Plain-English formula and symbolic formula	Improves usability	Two-column formula card
Interpretation Guide	Threshold guide	What high, low, good, bad, stressed, or attractive means	Needed for reading outputs correctly	Threshold table
Source Mapping	Build aid	Where each metric is sourced	Useful for later build and QA	Source table
Calculation Frequency	Build aid	Daily / weekly / monthly / event-driven refresh cadence	Supports system design	Reference table
Dependency Mapping	Build aid	What upstream data each metric needs	Useful for engineering handoff	Dependency table
Metric Priority Tier	Build aid	Must-have / should-have / stretch classification	Useful for phased build	Priority tags
Narrative Use Case	Build aid	Where the metric matters for decisions	Stops metrics becoming ornamental	Reference notes
Benchmark & Active Risk Terms	Reference	Definitions of benchmark, active return, tracking error, information ratio	Important for performance and risk tabs	Reference table
Scenario & Stress Terms	Reference	Definitions of scenario shock, sensitivity, recovery requirement, Monte Carlo percentile, probability-weighted outcome	Supports stress tab	Reference table
Cashflow & Efficiency Terms	Reference	Definitions of runway, fixed obligations ratio, capital conversion efficiency, deployment lag, drag	Supports cashflow and efficiency tabs	Reference table
On-Chain Cycle Terms	Reference	Definitions of funding rates, dominance, realised cap, ETF flows, stablecoin liquidity proxies	Supports crypto tab	Reference table
