Premium Financial Dashboard: Technical Design Specification

This specification provides prescriptive build rules for a GitHub Copilot Agent CLI (Claude LLM) to generate React 18 / Next.js 14 components with inline styles, Recharts, D3.js, and ECharts. Every CSS value, color hex, font size, and component pattern below is implementation-ready. The design fuses Horizon UI Pro's [AI Tool Directory](#) card architecture with Apple Liquid Glass effects on a teal-black dark-mode palette, targeting institutional-grade wealth dashboards deployed on Vercel with Supabase backend.

1. Architecture and technology foundation

Runtime: Next.js 14 App Router, React 18, TypeScript strict mode, deployed on Vercel.

Backend: Supabase (Postgres + Auth + Realtime subscriptions for live KPI updates).

Styling: Inline styles via JavaScript objects — no Tailwind, no CSS modules. All components self-contained. **Charts:** Recharts v2.12+ (area, bar, composed, radar), D3.js v7 (Sankey, Monte Carlo fan, heatmaps), ECharts v5.5+ via [echarts-for-react](#) (correlation matrices, calendar heatmaps). **Fonts:** "DM Sans", [sans-serif](#) for all UI text. [Horizon UI](#) "JetBrains Mono", [monospace](#) for numerical values, currency amounts, and percentages. Import via [@import url\('https://fonts.googleapis.com/css2?family=DM+Sans:wght@400;500;700&family=JetBrains+Mono:wght@400;500;600&display=swap'\)](#). **Animation:** Framer Motion v11 for mount/layout transitions, CSS transitions for hover/severity state changes.

2. Design tokens: the single source of truth

Every component references these tokens through a shared [tokens.ts](#) constant object. Never hardcode values inline — always reference the token.

2.1 Color tokens

typescript

```
export const colors = {  
  // === SURFACE HIERARCHY (darkest → lightest) ===  
  bgBase: '#05161A', // Page background – deepest teal-black
```
